[5] "Retail Investors Preference for Lottery Stocks: A Social Explanation"

Abstract - In this paper, we examine the effect social interaction has on retail investors' selection of stocks with high volatility and high skewness, also known as lottery stocks. To overcome the selection and simultaneity issues that arise when measuring social effects, we use the results of an online experiment that involves tens of thousands of individuals who vote every 5 minutes for which investments to buy or sell. Consistent with the model in Han, Hirshleifer, and Walden (2020), we find social interaction leads to lottery stock selection, and chat and group characteristics mediate the relation. We also address an unresolved question in the literature by documenting how retail investors communicate about lottery stocks.

Presentations: University of Michigan
